Anti-Fire Crackers Campaign

Dear Parents,

The upcoming season of festivals like Diwali, Chhat Pooja, Guru Parv etc. are the biggest festivals in our country. While you are excited about all the fun and catching up with family and friends, there are health hazards associated with these festivals as fire crackers are the attraction of this festive season.

Therefore, in pursuance to the circular issued by the department of education we take the initiative to make general awareness about hazards of fire crackers.

Heavy use of fire crackers which releases toxic pollutants like sulphur dioxide, nitrogen, carbon monoxide and many other which pollute the air and causes serious ailments like asthma, bronchitis, hypertension and cardiovascular problems. Sulphur dioxide has a damaging effect on lungs causing wheezing and breathing problems. Nitrogen and lead triggers eye irritation, skin allergies and respiratory distress. The air and noise pollution caused by these crackers also affect the life of innocent animals, birds and other living creatures on earth. The ailing and old persons are all the more prone to catch different allergies and diseases caused by pollution.

Sensitize your children about the ill effects of burning crackers and also encouraging them to celebrate these festivals by lighting candles, electric fancy lights, and earthen lamps and keeping the environment neat, clean and pollution free.

These festivals of lights and color also bring teachable moments with them for our children. You can teach them to celebrate responsibly and sensibly.

Have a Happy and a Safe Diwali!
