*“Celebrating 50 years of Excellence in Education”*

MMPS/Circular/18/2020

Dated: 17.09.2020

**Dear Parents and Students**

**Hope you all are keeping safe.**

Together the MMPS family has sailed through this difficult time and will further continue to do so. We all have beautifully accepted this new ‘Normal Situation’ and with each other’s cooperation we have been able to overcome the challenges which hurdled our way.

Further we wish to alarm you against the Vector Borne Diseases. The rainy season is the most conducive for vector borne diseases like Dengue, Chikungunya & Malaria which spread during this time every year. These are all mosquito generated diseases and sometimes gain epidemic proportions if preventive measures are not taken. Prevention is the best method to control any disease. In order to control and prevent the outbreak of Dengue, Chikungunya & Malaria, it is essential to prevent breeding of mosquitoes and students should be made aware of this. Every year during this season, our school used to take all preventive measures for prevention and control of such diseases. But since this year due to the Corona Pandemic, students are attending on-line classes we would like to advise them with the following awareness instructions to be followed at home-

- To avoid mosquito bites, wear full-sleeved clothing and use mosquito repellents. Put wire mesh on doors and windows to prevent entry of mosquitoes.
- Cover all water tanks and containers with well fitted lids to prevent breeding of mosquitoes.
- Empty, scrub and dry the room coolers every week before refilling to prevent breeding of mosquitoes. Paint the insides of coolers before use
- All unused containers, junk materials, tyres, coconut shells etc. should be properly disposed off.
- Change water in flower vases, plant pots, bird pots every week to prevent mosquito breeding.
- Cover the toilet seat if going out of home for more than a week.
- Use bed net at home and hospital during dengue fever to prevent mosquito bite and to interrupt transmission. Use aerosol, vaporizers (coils/mats) during day time.
- Don't allow water to stagnate in and around houses.

**We wish to see you all soon.**

**Stay Safe and continue to maintain social distancing.**
